EXP. 1: Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS

Aim:

To create a simple Flight Reservation System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are available over the internet without installing them on a computer.

In this project, a Flight Reservation System is created using Zoho Creator. It allows users to enter passenger details, select flight information, and submit reservations. The data is stored securely in the cloud and can be accessed anytime.

Algorithm:

1. Start.
2. Open Zoho Creator.
3. Enter passenger details.

4. Select flight details.
5. Choose departure and return dates.
6. Enter the number of travellers.
7. Select payment and booking status.
8. Submit the form.
9. Store the data in the cloud.
10. Stop.

Form Fields:

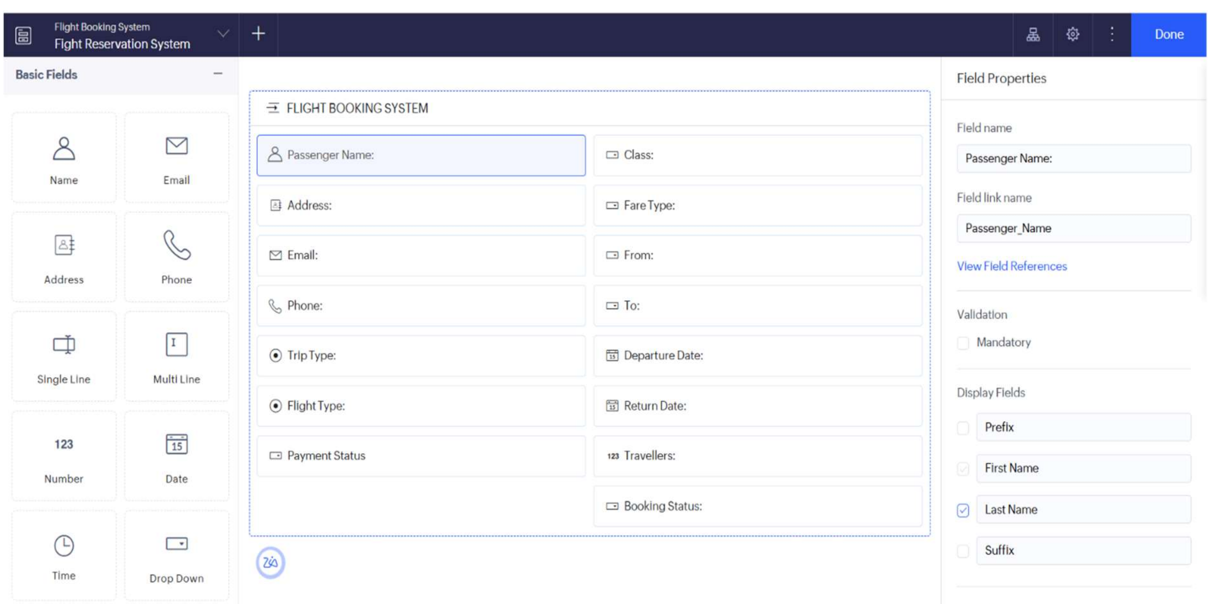
Field Name	Field Type
Passenger Name	Name
Address	Address
Email	Email
Phone	Phone
Class	Drop-down
Fare Type	Drop-down
From	Drop-down
To	Drop-down
Trip Type	Radio Button
Flight Type	Radio Button
Departure Date	Date

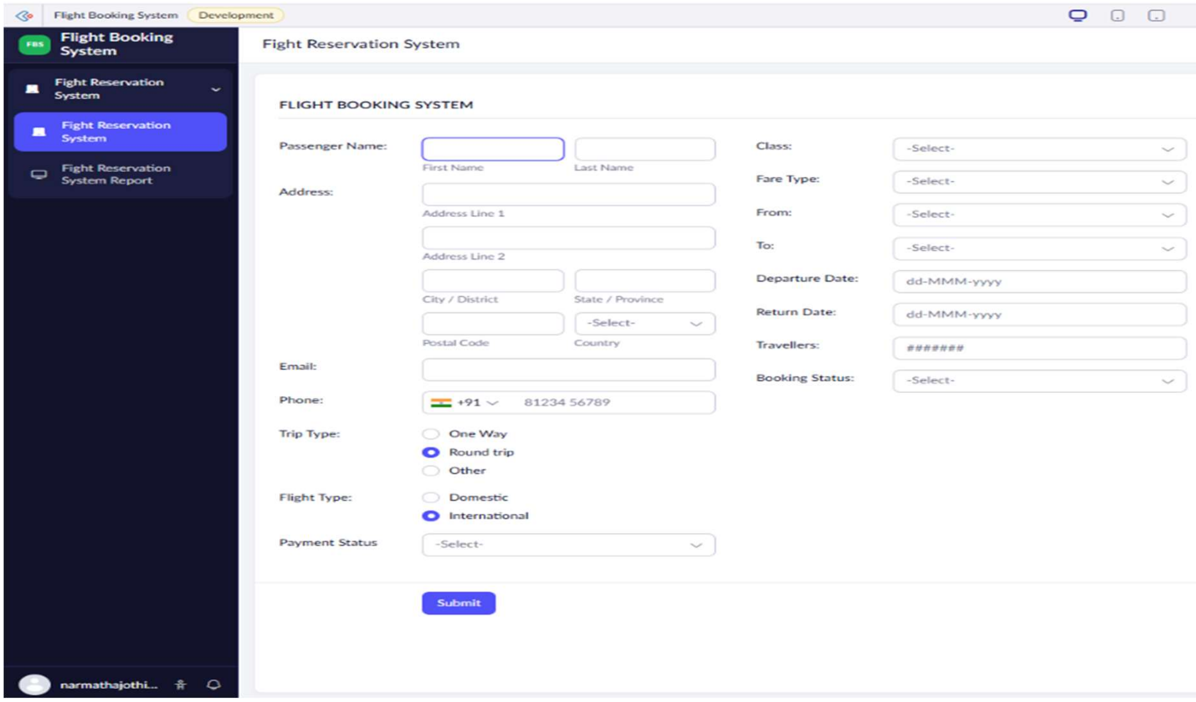
Return Date	Date
Travellers	Number
Payment Status	Drop-down
Booking Status	Drop-down

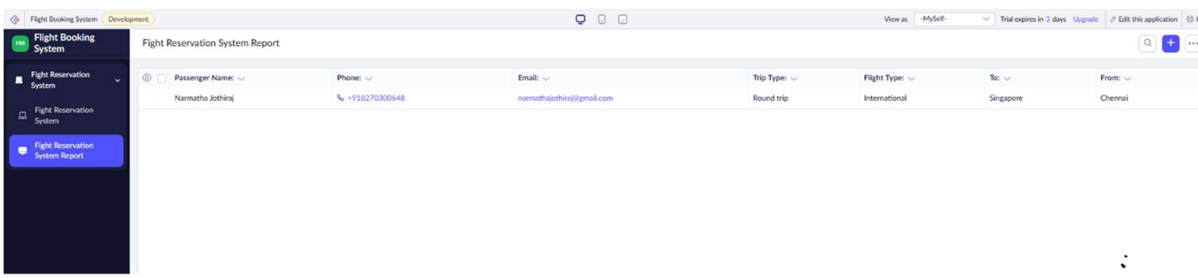
Procedure:

- Log in to Zoho Creator.
- Create a new application.
- Create a form named Flight Booking System.
- Add all the required fields.
- Save the form.
- Enter the booking details.
- Click Submit.
- Verify that the data is stored successfully.

Output:







Result:

The Flight Reservation System was successfully created using Zoho Creator. The application stores passenger and flight booking details in the cloud, demonstrating the SaaS model.

EXP. 2: Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS

Aim:

To develop a simple Property Buying & Rental Management System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Property Buying & Rental Management System is developed using Zoho Creator. The application allows users to add property details, manage buying and rental information, upload agreements, and maintain property records. The data is stored securely in the cloud and can be accessed anytime through the internet.

Algorithm:

1. Start.
2. Open the Property Buying & Rental Management application.
3. Enter property details.
4. Select whether the property is for Buy or Rent.
5. Enter owner and contact details.
6. Enter property information and upload images.
7. Save the property details.
8. Create rental agreements if required.
9. Store all information in the cloud database.
10. View property reports.
11. Stop.

Form Fields:

Property Details Form:

Field Name	Field Type
Property ID	Auto Number
Property Type	Drop-down
Buy/Rent	Drop-down
Owner Name	Single Line
Contact Number	Phone

Email	Email
Area (sq.ft)	Number
Place	Drop-down
Address	Multi Line
Property Value	Currency
Rental Amount	Currency
Rental Agreement	File Upload
Bedrooms	Number
Bathrooms	Number
Furnished	Radio Button
Parking	Radio Button
Property Status	Drop-down
Description	Multi Line
Upload Image	Image Upload

Rental Agreement Form:

Field Name	Field Type
Tenant Name	Single Line
Owner Name	Single Line
Property Details	Lookup
Rent Amount	Currency

Advance Amount	Currency
Agreement Date	Date
Agreement End Date	Date
Upload Agreement	File Upload
Remarks	Multi Line

Procedure:

- Log in to Zoho Creator.
- Create a new application named Property Buying & Rental Management.
- Create the Property Details form.
- Add all the required fields.
- Create the Rental Agreement form.
- Configure reports for viewing property records.
- Save the application.
- Enter sample property and rental details.
- Submit the form.
- Verify that the records are stored successfully in the cloud.

Result:

The Property Buying & Rental Management System was successfully developed using Zoho Creator. The application enables users to manage property buying and rental information, maintain rental agreements, upload property images, and store all records securely in the cloud. This demonstrates the implementation of the Software as a Service (SaaS) model using Zoho Creator.

EXP. 3: Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as search for cabs, from, to, rental, out station, Package type, hours/Days etc.

Aim:

To develop a simple Car Booking Reservation System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where software applications are hosted on the cloud and accessed through the internet.

In this project, a Car Booking Reservation System is developed using Zoho Creator. The application allows users to search for cabs, choose pickup and destination locations, select rental or outstation trips, choose package type, enter travel details, and book a car online. All booking details are stored securely in the cloud and can be accessed anytime.

Algorithm:

1. Start.
2. Open the Car Booking Reservation System.

3. Enter customer details.
4. Search and select the cab type.
5. Choose the pickup (From) and destination (To) locations.
6. Select Trip Type (Rental/Outstation).
7. Choose the package type.
8. Enter rental hours or outstation days.
9. Select pickup date and time.
10. Choose the payment mode.
11. Submit the booking form.
12. Store the booking details in the cloud database.
13. Display the booking status.
14. Stop.

Form Fields:

Field Name	Field Type

EXP. 4: Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Aim:

To develop a simple Library Book Reservation System for SIMATS Library using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where software applications are hosted on the cloud and accessed through the internet.

In this project, a Library Book Reservation System is developed using Zoho Creator. The application allows users to store and manage book details such as title, author, publication, year, edition, number of copies, rack number, and book status. The library records are stored in the cloud and can be accessed and managed easily.

Algorithm:

1. Start.
2. Open the Library Book Reservation System.
3. Enter the book details.
4. Enter the title and author name.
5. Enter publication, year, and edition.
6. Enter the number of copies.
7. Enter the rack number.
8. Select the book status.
9. Submit the form.
10. Store the book details in the cloud database.
11. View and manage the library records.
12. Stop.

Form Fields:

Field Name	Field Type
Book ID	Auto Number
Title of the Book	Single Line
Author	Single Line
Publication	Single Line
Year	Number

Edition	Drop-down
No. of Copies	Number
Rack No.	Number
Book Status	Drop-down
Student Name	Name
Student ID	Single Line
Reservation Date	Date
Return Date	Date

Procedure:

- Log in to Zoho Creator.
- Create a new application named SIMATS Library Book Reservation System.
- Create a form named Book Reservation.
- Add all the required book and student fields.
- Add dropdown options for Edition and Book Status.
- Save the form.
- Enter sample book and student details.
- Click Submit.
- Verify that the details are stored successfully in the cloud database.
- View the book records using the generated report.

Result:

The SIMATS Library Book Reservation System was successfully developed using Zoho Creator. The application allows users to manage book details, check book availability, reserve books, and maintain taken and returned status. The information is stored in the cloud, demonstrating the Software as a Service (SaaS) model.

EXP. 5: Create a simple cloud software application for Mark Sheet Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the student, Reg no of the student , Subjects , Marks, Average, percentage, rank, overall performance etc.

Aim:

To develop a simple Mark Sheet Processing System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model in which applications are hosted on the cloud and accessed through the internet without installing them on a local computer.

In this project, a Mark Sheet Processing System is developed using Zoho Creator. The application allows users to enter student details, subject names, marks, total marks, average, percentage, rank, and overall performance. All the information is stored securely in the cloud and can be accessed and managed anytime.

Algorithm:

1. Start.
2. Open the Mark Sheet Processing System.
3. Enter the student details.
4. Enter the subject names and marks.
5. Calculate the total marks.
6. Calculate the average and percentage.
7. Assign the student's rank.
8. Select the overall performance.
9. Submit the form.
10. Store the data in the cloud database.
11. Display the student's mark sheet.
12. Stop.

Form Fields:

Field Name	Field Type
Student Name	Name
Register Number	Single Line
Department	Drop-down
Semester	Drop-down
Subject 1	Single Line
Marks 1	Number
Subject 2	Single Line

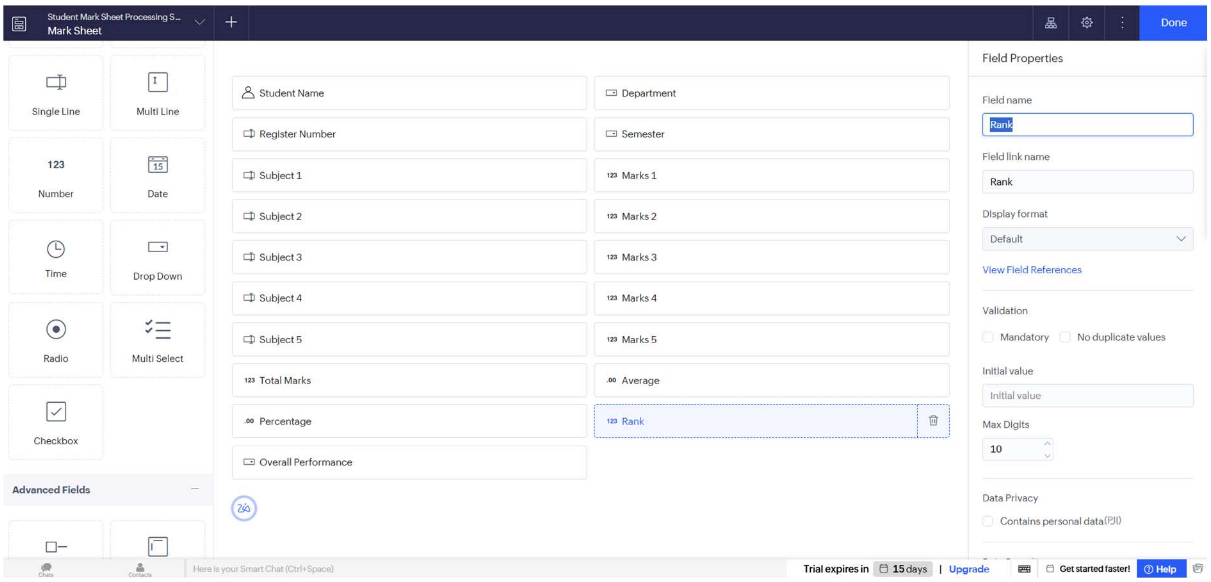
Marks 2	Number
Subject 3	Single Line
Marks 3	Number
Subject 4	Single Line
Marks 4	Number
Subject 5	Single Line
Marks 5	Number
Total Marks	Number
Average	Decimal
Percentage	Decimal
Rank	Number
Overall Performance	Drop-down

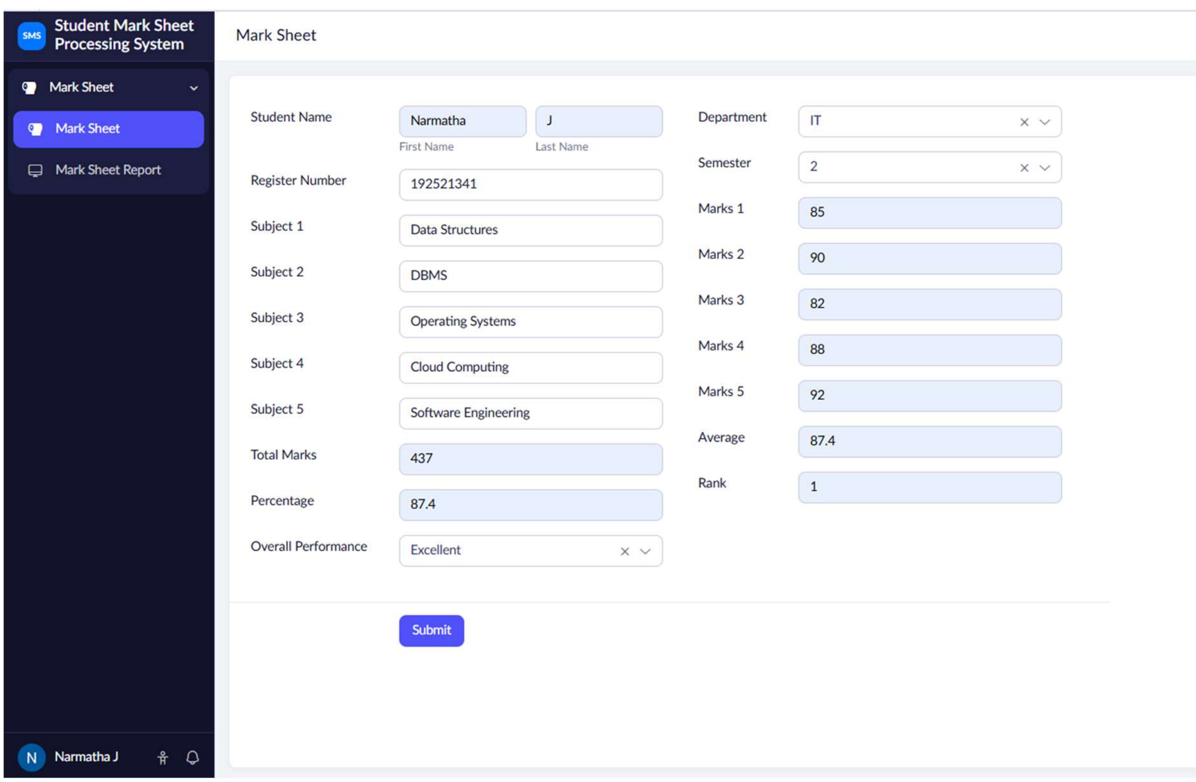
Procedure:

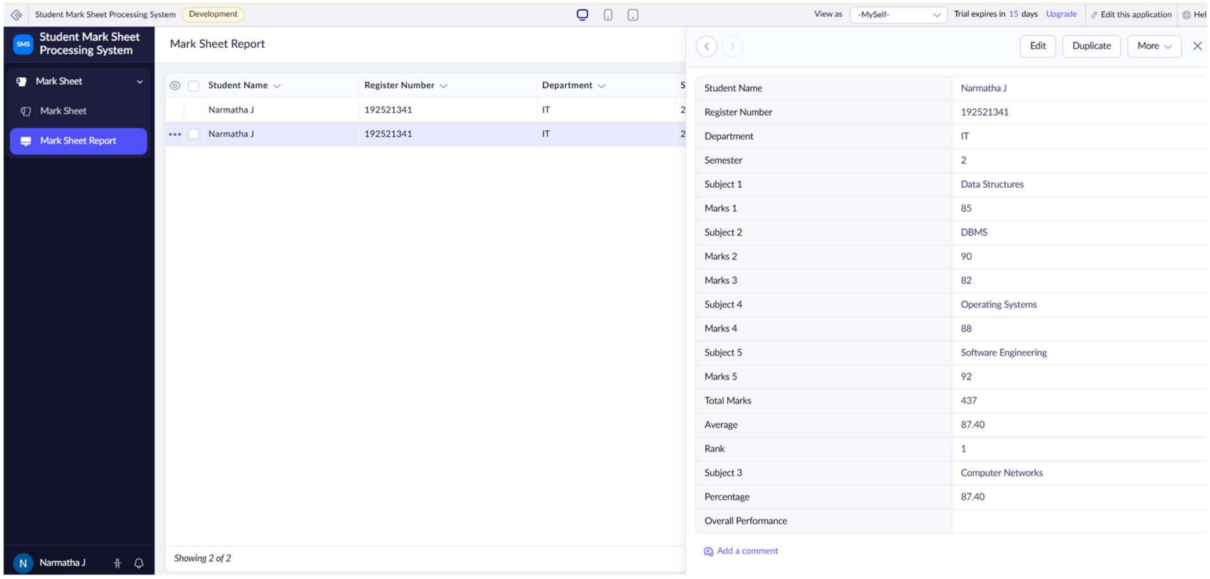
- Log in to Zoho Creator.
- Create a new application named Mark Sheet Processing System.
- Create a form named Mark Sheet.
- Add all the required fields.
- Configure drop-down lists for Department, Semester, and Overall Performance.
- Save the form.
- Enter the student's details and marks.
- Calculate and enter the total, average, percentage, and rank.
- Click Submit.

- Verify that the mark sheet details are stored successfully in the cloud database.
- View the records using the generated report.

Output:







Result:

The Mark Sheet Processing System was successfully developed using Zoho Creator. The application allows users to enter student information, process marks, calculate results, and store the data securely in the cloud. This demonstrates the implementation of the Software as a Service (SaaS) model using Zoho Creator.

EXP. 6: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Aim:

To develop a simple Payroll Processing System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Payroll Processing System is developed using Zoho Creator. The application allows users to maintain employee details, salary information, allowances, gross pay, and net pay. The payroll records are stored securely in the cloud and can be accessed anytime through the internet.

Algorithm:

1. Start.
2. Open the Payroll Processing System.
3. Enter employee details.
4. Enter experience details.
5. Enter salary details such as Basic Pay, HRA, DA, and TA.
6. Calculate Gross Pay and Net Pay.
7. Select the payment month and payment status.
8. Submit the payroll details.
9. Store the data in the cloud database.
10. View payroll records.
11. Stop.

Form Fields:

Result:

The Payroll Processing System was successfully developed using Zoho Creator. The application allows users to manage employee salary details, calculate payroll, and store payroll information securely in the cloud. This demonstrates the implementation of the Software as a Service (SaaS) model using Zoho Creator.

EXP. 7: Create a simple cloud software application for Students Attendance System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the students, course, present , Absent, course attendance, OD request, grade, attendance percentage, etc.

Aim:

To develop a simple Students Attendance System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Students Attendance System is developed using Zoho Creator. The application allows users to record student attendance, manage OD requests, calculate attendance percentage, and maintain grades. The attendance details are stored in the cloud and can be accessed and managed easily.

Algorithm:

1. Start.
2. Open the Students Attendance System.
3. Enter student details.
4. Select the course and subject.
5. Enter the attendance date.
6. Select Present or Absent.
7. Enter course attendance.
8. Select the OD request status.
9. Calculate attendance percentage.
10. Assign the grade.
11. Submit the form.
12. Store the attendance details in the cloud.
13. Stop.

Form Fields:

Field Name	Field Type
Student ID	Auto Number
Student Name	Name
Register Number	Single Line
Course	Drop-down

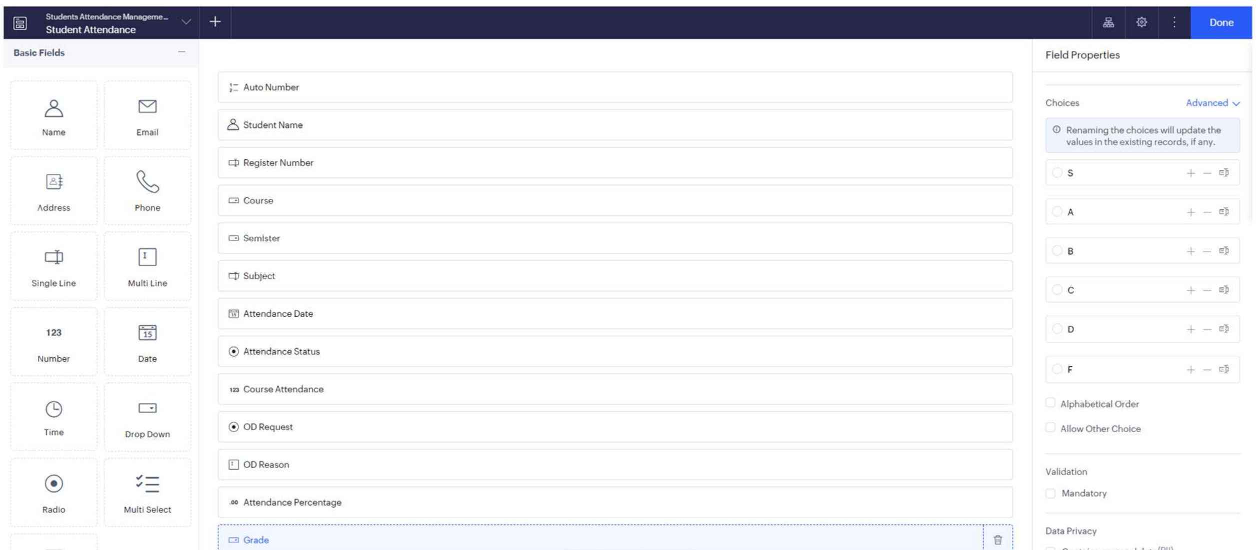
Semester	Drop-down
Subject	Single Line
Attendance Date	Date
Attendance Status	Radio Button
Course Attendance	Number
OD Request	Radio Button
OD Reason	Multi Line
Attendance Percentage	Decimal
Grade	Drop-down

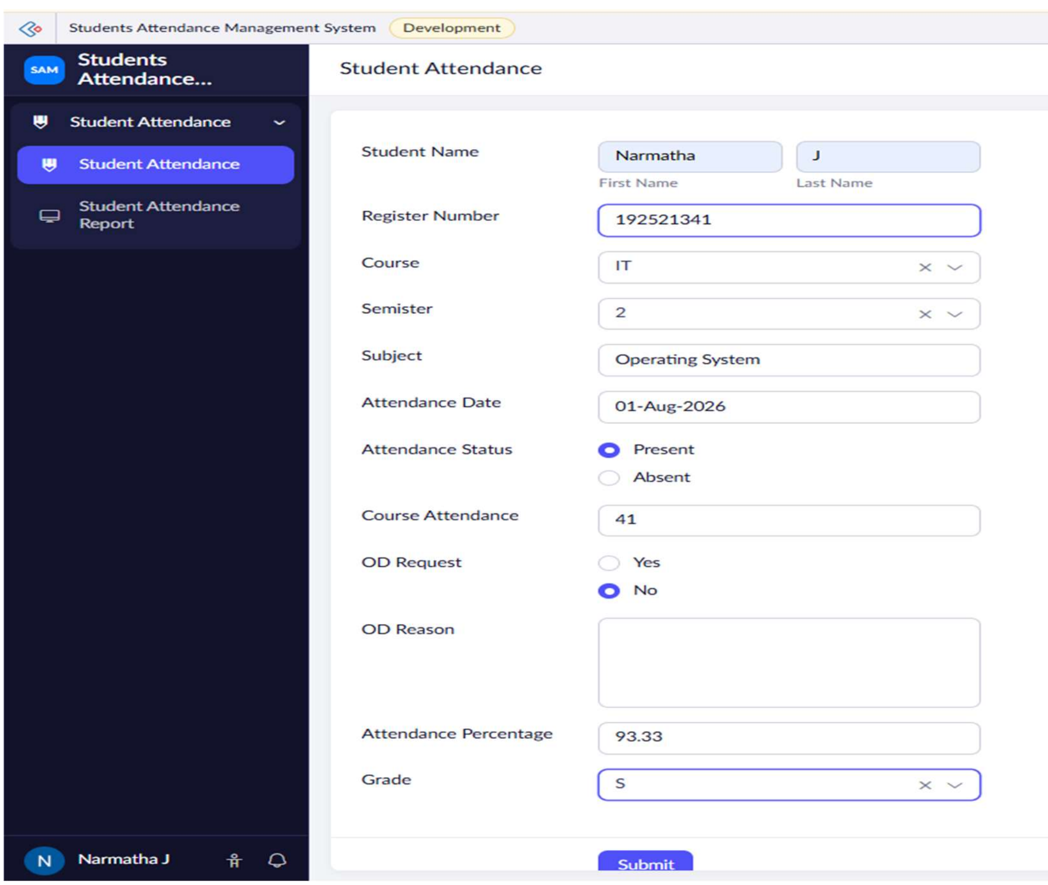
Procedure:

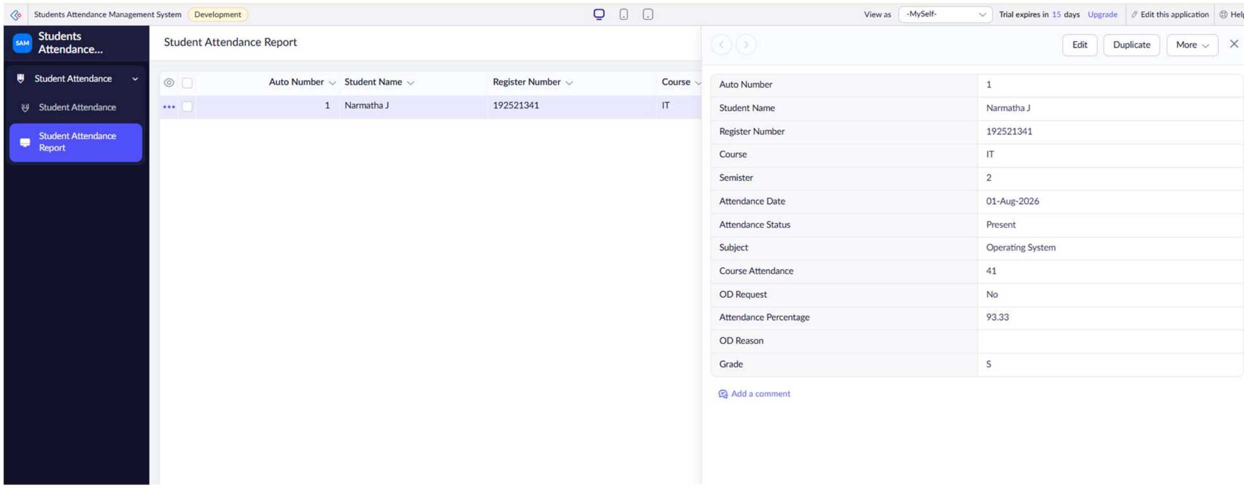
- Log in to Zoho Creator.
- Create a new application named Students Attendance System.
- Create a form named Student Attendance.
- Add all the required fields.
- Configure the dropdowns and radio buttons.
- Save the form.
- Enter sample student attendance details.
- Select Present/Absent and OD status.

- Enter the attendance percentage and grade.
- Click Submit.
- Verify that the attendance details are stored successfully in the cloud database.

Output:







Result:

The Students Attendance System was successfully developed using Zoho Creator. The application allows users to manage student attendance, OD requests, attendance percentage, and grades. The data is stored securely in the cloud, demonstrating the SaaS model.

EXP. 8: Create a simple cloud web application for student counselling system using any Cloud Service Provider to demonstrate SaaS with the fields of student name, age, address, phone, subjects studied, Year of passing, percentage of marks, domain interest, etc.

Aim:

To develop a simple Student Counselling System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Student Counselling System is developed using Zoho Creator. The application stores student personal details, academic information, subjects studied, marks, and domain interests. It helps counsellors manage student information and provide suitable counselling based on their interests and academic performance.

Algorithm:

1. Start.
2. Open the Student Counselling System.
3. Enter student personal details.
4. Enter subjects studied.
5. Enter year of passing and percentage of marks.
6. Select the student's domain interest.
7. Select the preferred course.
8. Enter counselling details.
9. Submit the form.
10. Store the student details in the cloud database.
11. View and manage the counselling records.
12. Stop.

Form Fields:

Field Name	Field Type

Result:

The Student Counselling System was successfully developed using Zoho Creator. The application allows counsellors to manage student personal details, academic information, domain interests, and counselling records in the cloud. This demonstrates the Software as a Service (SaaS) model.

EXP. 9: Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Aim:

To develop a simple Hospital Information System for SIMATS Hospital using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Hospital Information System is developed using Zoho Creator. The application stores patient details, attender information, doctor details, disease information, and treatment status. The records are securely stored in the cloud and can be accessed and managed easily by hospital staff.

Algorithm:

1. Start.
2. Open the Hospital Information System.
3. Enter patient details.
4. Enter attender information.
5. Select the doctor and department.
6. Enter disease details.
7. Select the admission date and treatment status.
8. Submit the form.
9. Store the patient information in the cloud database.
10. View and manage patient records.
11. Stop.

Procedure:

1. Log in to Zoho Creator.
2. Create a new application named SIMATS Hospital Information System.
3. Create a form named Patient Information.
4. Add all the required fields.
5. Configure the drop-down lists.
6. Save the form.
7. Enter sample patient details.
8. Click Submit.
9. Verify that the patient information is stored successfully in the cloud database.
10. View the records using the generated report.

Result:

The Hospital Information System was successfully developed using Zoho Creator. The application allows users to manage patient, attender, doctor, and treatment details securely in the cloud. This demonstrates the implementation of the Software as a Service (SaaS) model using Zoho Creator.

EXP. 10: Create a simple cloud software application to run a c program to display the student information using any Cloud Service Provider to demonstrate SaaS with the template of student name, reg no, address, phone, age, courses, grades and attendance report, progress report, Semester mark sheet forms

Aim:

To develop a simple Student Information System using Zoho Creator and demonstrate the Software as a Service (SaaS) model by managing student information, attendance, progress, and semester marks.

Software / Tools Required:

- Zoho Creator
- C Compiler
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, a Student Information System is created using Zoho Creator. It stores student details such as name, register number, address, phone, age, course, grades, attendance, progress, and semester marks. A simple C program can be used to display the student information. The student records are stored and managed in the cloud.

Algorithm:

1. Start.
2. Open the Student Information System.
3. Enter student details.
4. Enter course and grade information.
5. Enter attendance details.
6. Enter progress and semester marks.
7. Submit the student information.
8. Store the details in the cloud database.
9. Run the C program.
10. Display the student information.
11. Stop.

Form Fields:

Field Name	Field Type
Student ID	Auto Number
Student Name	Name

Register Number	Single Line
Address	Address
Phone	Phone
Age	Number
Course	Drop-down
Grade	Drop-down
Attendance Percentage	Decimal
Progress Report	Multi Line
Semester	Drop-down
Semester Mark	Number

Procedure:

- Log in to Zoho Creator.
- Create a new application named Student Information System.
- Create the Student Information form.
- Add the required student fields.
- Create Attendance Report, Progress Report, and Semester Mark Sheet forms.
- Enter sample student details.
- Save and submit the records.
- Verify that the student information is stored in the cloud.

- Write and run the C program using a C compiler.
- Display the student information using the C program.
- View the stored records using Zoho Creator reports.

Result:

The Student Information System was successfully developed using Zoho Creator. Student details, attendance, progress, and semester marks were stored and managed in the cloud. The C program was used to display the student information, demonstrating the SaaS model.

EXP. 11: Create a simple cloud software application for online super market using any Cloud Service Provider to demonstrate SaaS with the template of customer name, address, phone, email, items, quantity etc. with the classification form.

Aim:

To develop a simple Online Supermarket System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Software / Tools Required:

- Zoho Creator
- Web Browser
- Internet Connection
- Laptop/Desktop

Theory:

Software as a Service (SaaS) is a cloud computing model where applications are hosted on the cloud and accessed through the internet.

In this project, an Online Supermarket System is developed using Zoho Creator. The application allows customers to enter their details, select items, specify quantity, and place orders. An item classification form is used to manage products according to their categories. All information is stored in the cloud.

Algorithm:

1. Start.
2. Open the Online Supermarket System.
3. Enter customer details.
4. Select the item and category.
5. Enter the quantity.
6. Check the item availability.
7. Calculate the total amount.
8. Enter payment details.
9. Submit the order.
10. Store the order information in the cloud.
11. Stop.

Form Fields:

Customer Order Form:

Field Name	Field Type
Order ID	Auto Number
Customer Name	Name
Address	Address
Phone	Phone
Email	Email

Item Name	Drop-down
Item Category	Drop-down
Quantity	Number
Price	Currency
Total Amount	Currency
Order Date	Date
Payment Status	Drop-down

Item Classification Form:

Field Name	Field Type
Item ID	Auto Number
Item Name	Single Line
Category	Drop-down
Brand	Single Line
Price	Currency
Available Quantity	Number
Unit	Drop-down
Item Status	Drop-down

Procedure:

- Log in to Zoho Creator.
- Create a new application named Online Supermarket System.
- Create a Customer Order form.
- Add customer and order details.
- Create an Item Classification form.
- Add item name, category, price, quantity, unit, and status fields.
- Configure the required drop-down values.
- Save the forms.
- Enter sample customer and item details.
- Submit the order.
- Verify that the records are stored successfully in the cloud database.
- View the records using reports.
